Place the digits 1 through 9 into the empty cells in the grids so that each digit appears exactly once in each of the rows, columns, and bold outlined regions. In Odd Sudoku, shaded cells have odd digits (13579) only. In Extra Region Sudoku, each digit also appears exactly once in each group of shaded cells. In Diagonal Sudoku, each digit also appears exactly once in each of the marked diagonals. Some 3X3 regions are common to two grids.

Answer key: Enter the digits (including the givens) along the marked rows.
